

Mobile App Speeds and Improves Incident Tracking

Many worksites rely on traditional pen and paper reporting to document damage, loss or injury from work-related incidents. A mobile app solution can speed on-site incident reports and improve the quality of documentation with photo and video attachments. Faster and more thorough reporting can speed claims and incident resolution.

RunMobile ITS (Incident Tracking Solution) is a mobile incident tracking solution that enables users to collect, store and perform analytics on information collected after any type of workplace incident. The app is easily downloaded and deployed to any iOS, Android, Blackberry or Windows 8 device. The intuitive user interface features a form-driven data collection process to ensure fast, consistent and detailed reporting.

Incident data can be integrated to other inventory management, claims management or supply chain software. The RunMobile ITS dashboard shows aggregate incident data over time and is ideal for trend analysis and risk mitigation.

Let's Get Started

RunMobile ITS is available for use through an enterprise license agreement. To view a demo and discuss pricing, contact us at info@runmobile.com or call 678-533-5151.

ITS AT A GLANCE

RunMobile ITS (Incident Tracking Solution) combines a mobile application for incident report capture with a backend database and browser-based dashboard to analyze aggregate report data.

MOBILE APP

Operates on current iOS, Android, Blackberry and Windows 8 devices. Optimized for tablet use.

FEATURES AND BENEFITS

- Automates and speeds incident reporting
- Operates on multiple platforms to work on the device of your choice
- Utilizes wi-fi to send real-time reports; stores data to device if no signal is present
- Captures photos, videos and the geo-location of damages
- Dashboard view of aggregate data over time for incident analysis and trending
